IN MORE THAN
COUNTRIES IN EUROPE,
AMERICA AND ASIA

**WE
VACUUM
EVERYTHING**

ABSORBING GYPSUM DUST

**Centrally placed
industrial vacuum cleaner
with piping**

TASK

At the beginning of the processing, the raw gypsum is dried in a 28-metre long rotary kiln. This inevitably releases dust, and appropriate equipment is needed to clean the hall and the plants.

SPECIAL FEATURE

- | Type DA 5150 is connected to an extensive piping system with several suction points
- | Comprehensive coverage of all areas of the hall and the facilities

ADVANTAGES

- | High flexibility: The central positioning and allows the vacuum to remain in place and vacuum on several levels at the same time if required.
- | Increased efficiency: Vacuuming all surfaces with a single vacuum cleaner and a powerful piping system saves time and labour.
- | Large capacity: The wheeled container with a capacity of 500 litres offers sufficient space for the dust produced in everyday work, which means that emptying is necessary less often.

OUR SOLUTION

DA 5150 as central suction station

- | Kw: 15
- | Air: 860 m³/h
- | Pressure: -310 mbar
- | Pipeline: 28 meter

WE VACUUM EVERYTHING

1

HANDMADE IN RIEMSLOH

If it says Ruwac,
then there's Ruwac inside.
All of our products for the
European market are produced
in Germany at our Riemsloh site.

2

INDIVIDUAL SOLUTION

We provide demonstrations
and advising on site!
For more than just vacuums.

3

HIGH QUALITY MATERIALS

A Ruwac vacuum delivers
outstanding, long-term extraction.
To make sure this is the case,
we use high-quality components
like GRP housing parts.

4

RESEARCH AND DEVELOPMENT

We are always conducting
research and development
so we can meet any requirement
with the best solutions

5

COMPREHENSIVE SERVICE-CONCEPT

Over 20 qualified service
technicians are available
throughout Germany to
ensure safety and maintenance
for your industrial vacuum.

6

INTEGRATED CONSULTANT

From conception to
commissioning in
compliance with
all standards and regulations.
