COUNTRIES IN EUROPE,
AMERICA AND ASIA

WE VACUUM EVERYTHING

POWDERCOATING

Suction instead of masking

TASK

Machine parts are powder-coated during their manufacture. Now they were looking for an economical alternative for sealing screw holes before applying the powder. The usual methods are plugging and masking. However, both methods require a lot of manual work before - and especially after - coating.

SPECIAL FEATURE

- | After the coating process, sealed boreholes are simply sucked out.
- | Ruwac has made these customised nozzles
- | For approximately eight holes per component, 3 special nozzles are required, which fit into the respective borehole

ADVANTAGES

- | Integration of suction in flow production
- | No interruption of production
- | Individual adaptation to the production line by means of a mobile suction unit

OUR SOLUTION

Industrial vacuum cleaner R01 S, zone 22, for mobile use

- | KW: 3,0
- | Air: 355 m³/h
- | Pressure: - 240 mbar

Multiple individual nozzles

WE VACUUM EVERYTHING

1

HANDMADE IN RIEMSLOH

If it says Ruwac,
then there's Ruwac inside.
All of our products for the
European market are produced
in Germany at our Riemsloh site.

2

INDIVIDUAL SOLUTION

We provide demonstrations
and advising on site!
For more than just vacuums.

3

HIGH QUALITY MATERIALS

A Ruwac vacuum delivers
outstanding, long-term extraction.
To make sure this is the case,
we use high-quality components
like GRP housing parts.

4

RESEARCH AND DEVELOPMENT

We are always conducting
research and development
so we can meet any requirement
with the best solutions

5

COMPREHENSIVE SERVICE-CONCEPT

Over 20 qualified service
technicians are available
throughout Germany to
ensure safety and maintenance
for your industrial vacuum.

6

INTEGRATED CONSULTANT

From conception to
commissioning in
compliance with
all standards and regulations.
