WE VACUUM EVERYTHING

METAL- PROCESSING

Extraction of
Cooling lubricants on
Metal parts

TASK

The wire, the starting material, is used almost 100%. Nevertheless, cooling lubricant, which also contains a high proportion of metal, is produced in every „combination machine“ that carries out all (forming) process steps from coil to screw. For the extraction of the lubricant, the customer was looking for a suction unit that would allow the use of the customer-specific disposal containers.

SPECIAL FEATURE

- | Construction of a plant that was „built around“ customised containers. „built around“.
- | Transport with an electric pedestrian stacker
- | Strong suction power due to two drives, each with a 7.5 kW motor and Ruwac blower
- | Separation of the oil via a cyclone separator

ADVANTAGES

- | The sucked-in air components enter the actual suction unit and are processed by four oil filter cartridges
- | Emptying in the customer-specific container

OUR SOLUTION

InIndustrial vacuum cleaner special system

- | KW: 2 x 7,5
- | Air: 750 m³/h
- | Pressure: -350 mbar
- | Capacity of the customer's container: approx. 500 litres

WE VACUUM EVERYTHING

1

HANDMADE IN RIEMSLOH

If it says Ruwac,
then there's Ruwac inside.
All of our products for the
European market are produced
in Germany at our Riemsloh site.

2

INDIVIDUAL SOLUTION

We provide demonstrations
and advising on site!
For more than just vacuums.

3

HIGH QUALITY MATERIALS

A Ruwac vacuum delivers
outstanding, long-term extraction.
To make sure this is the case,
we use high-quality components
like GRP housing parts.

4

RESEARCH AND DEVELOPMENT

We are always conducting
research and development
so we can meet any requirement
with the best solutions

5

COMPREHENSIVE SERVICE-CONCEPT

Over 20 qualified service
technicians are available
throughout Germany to
ensure safety and maintenance
for your industrial vacuum.

6

INTEGRATED CONSULTANT

From conception to
commissioning in
compliance with
all standards and regulations.
